

① - Familial Adenomatous polyposis (FAP) Surgery
 is an Autosomal dominant inherited condition in which
 numerous Adenomatous polyps form mainly in the
 Epithelium of the large intestine, while these polyps
 start out benign, Malignant transformation into a colon
 cancer occurs when they are left untreated

② - Management -- FAP treatment would be pharmacological
 as NSAIDs -- Sulindac, Celecoxib [selective cyclo-oxygenase
 - 2 inhibitor] Aspirin may cause regression of established
 Adenomatous polyps in individuals and may also reduce
 the number and size of colorectal Adenomatous

③ - HNPCC or Lynch syndrome is an Autosomal dominant
 genetic condition that's associated with high risks of
 colon cancer as well as other cancer including endometrial
 cancer [second most common] ovary, stomach, small
 intestine, hepatobiliary tract, upper urinary tract, brain
