Introduction

What is
E-Government

The problems of
E- Government

Conclusion

References

There are several challenges and barriers that can delay progress of E- Government.

E- Government:

The use of information and communication technologies (ICTs) to improve the activities of public sector organisations.

Privacy

Privacy is a critical issue in E-Government in both developed and developing countries.

Privacy refers to the guarantee of an appropriate level of protection regarding information attributed to an individual.

Security

Security is one of the most significant challenges for E-Government.

Security means protection of all information and systems against any disclosure to unauthorized access.

Resistance to change to electronic ways

the work place in E- Government means the transformation from manual methods of work to electronic ones.

The new changes will create a new advanced environment completely different to what has been used for many years.

Employees see that as a threat to their positions and fear losing their jobs and power.

Culture

Culture was defined as a set of important assumptions, beliefs and values that all members of a society share in common.

Cultural differences and individual behavior patterns play a role in the acceptance and use of new technology.

Conclusion:

- E- Governemnt is not an easy job
- It faces many challenges and barriers
- Those challenges have to be treated very carefully

THANKS!!! :)
