- 1.Define the digestive system
- 2.Describe the organ of digestive system
- 3.Mention the blood supply of each organ of digestive system
- 4.Explain accessory organ of digestive system

Definition:-

It is an organ system within humans which takes in food, digests it and absorb energy and nutrients, and expels the remaining waste as feces.

Major organs of digestive system:

- 1) MOUTH
- 2) PHARYNX
- 3) ESOPHAGUS
- 4) STOMACH
- **5) SMALL INTESTINE**
- **6) LARGE INTESTINE**

- Liver
- Gallbladder
- Pancreas
- Salivary gland

ANATOMY OF DIGESTIVE SYSTEM

➤ MOUTH: it is the first part of alimentary canal that receive food and produce saliva

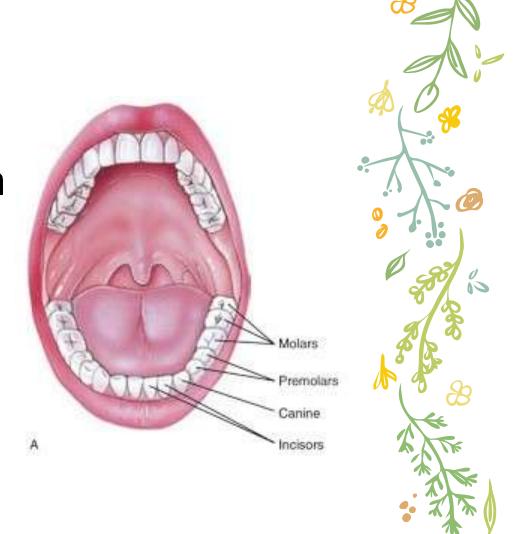

> TONGUE:

Is a muscular organ covered by

mucous membrane

- > TEETH:> Primary teeth
- > Permanent teeth

THE PHARYNX

The pharynx is the part of the throat that is behind the mouth and nasal cavity and above the esophagus and the larynx, or the tubes going down to the stomach and the lungs.

pharynx is divided into 3 parts

- Nasopharynx
- Oro pharynx
- Laryngo pharynx

THE ESOPHAGUS

The esophagus is a muscular tube connecting the throat (pharynx) with the stomach.

- Length: 25 cm
- Diameter: 2 cm

> STOMACH

• The stomach is a muscular organ located on the left side of the upper abdomen.

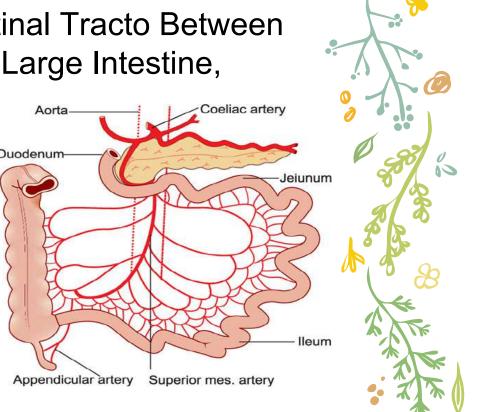

The Small Intestine

The Small Intestine Or Small Bowel is the Part of the Gastrointestinal Tracto Between The Stomach And The Large Intestine,

- \triangleright Length 3m 5m.
- ➤ Diameter -2.5-3 cm
- > 1 inch.

> LARGE INTESTINE

Water is absorbed here and the remaining waste material is stored as feces before being removed by

defecation

BLOOD SUPPLY OF EACH ORGAN

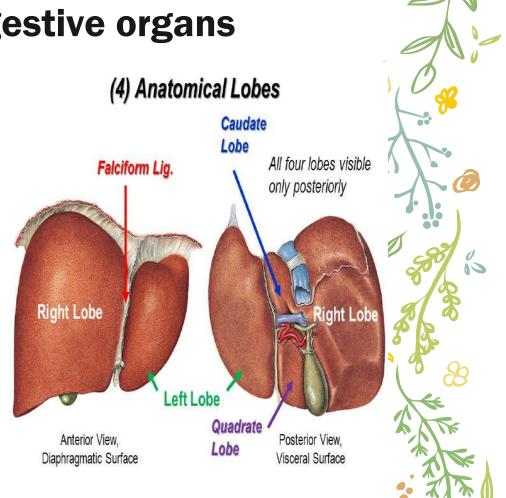

ORGAN OF DIGESTIVE SYSTEM	Blood supply
MOUTH	(lingual artery) (external carotid artery)
ESOPHAGUS	(Esophageal arteries) (Inferior phrenic arteries)
STOMACH	(right and Left gastroepiploic artery)
SMALL INTESTINE	(the coeliac trunk) (the superior mesenteric artery)
LARGE INTESTINE	(the superior & inferior mesenteric artery)

Accessory of digestive organs

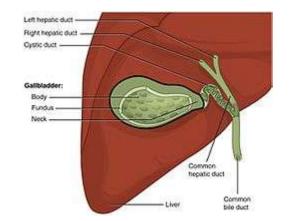

is an organ only found in vertebrates, detoxifies various metabolites, synthesizes proteins, and produces biochemical necessary for digestion

The Gallbladder Is A Small Hollow Organ Where Bile Is Stored And Concentrated Before It Is Released Into The Small Intestine

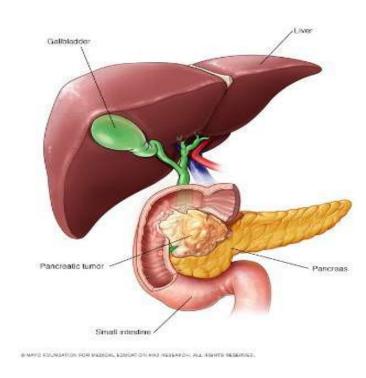

Pancreas

The pancreas is a glandular organ in the digestive system and endocrine system of vertebrates.

Length: 15 cm or 6 inch

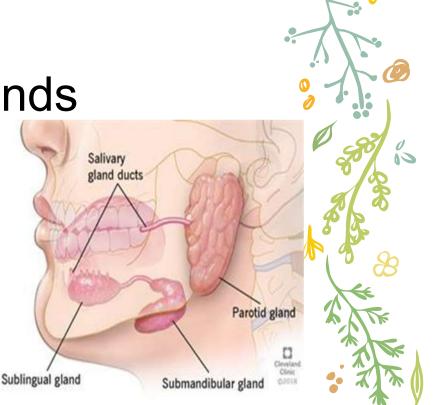

> Parotid

➤ Submandibular glands

>Sublingual glands
